

## Waterbeach New Building

**EWG have been commissioned to construct a new building at Waterbeach to accommodate the Locking Fitters.**

This project involved the demolition of the existing buildings to accommodate the construction of the new base footings & pilings, the installation of all utilities services & all internal power, water and waste requirements along with sufficient secure & safe parking for staff.

This scheme is part of Network Rail's ongoing enhancement project to offer better staff operational & welfare facilities.

This scheme was delivered in a timely and controlled manner and handed back to the client, the feedback has been positive as this was a difficult location for the project and involved several outside parties.
